

### **Playoff Ranking Determination:**

- Teams are awarded points each night based on performance.
  - Example: In a 35 team league, finishing 1<sup>st</sup> in A Pool = 35 points. Finished last in the bottom pool = 1 point.
- Playoff rankings are based on the average point total for the final 4 nights of the regular season.
- In the event of a tie in average points, total points are used to determine rankings.
- This format creates more parity for the playoffs and deters teams from “sandbagging” the week before playoffs.
